Optimum performance for every extractor

With the new duct system COMPAIR PRIME flow[®], Naber takes kitchen ventilation to a new dimension. The innovation is ultra-efficient and installation is quicker, more reliable and simpler than with any other system on the market.

It's what's behind the extractor fan that matters. Whether you have a classic wall hood or a downdraft system in the free-standing cooking island: without optimum conveyance of the extracted air, the full potential of the devices cannot be realised. The amount of air extracted decreases, and odours, grease, fine dust and moisture are not sufficiently removed. This shortcoming has to be compensated by high power levels during operation, which means more noise, higher power consumption and less well-being.

Quantum leap in aerodynamics

COMPAIR PRIME flow[®] from Naber offers the perfect solution here: the bends and moulded parts are designed with the aid of 3D flow simulations. The bionic form of the housings and the three-dimensionally shaped guide elements reduce air resistance to a minimum. The smooth material, stepless transitions and built-in turbulators on the guide elements prevent the air flow from stalling. This results in optimum efficiency values, quiet operation, maximum capture of the vapour and thus a high level of creature comforts.

Foolproof and flexible assembly

The simple assembly is nothing less than a revolution. Thanks to the new universal connectors with integrated double seals, ducts and moulded parts are simply plugged together. This is sturdy, permanently airtight and takes seconds. The previously standard, unreliable sealing with adhesive tape is no longer necessary. Complete modules can also be pre-assembled instead of fiddling around in or on top of the kitchen cupboard.

The built-in flexible routing is unique. Each universal connector has a flexible zone. This means you can easily change the course of the air duct by hand by up to 15 degrees in any direction. Wall protrusions, furniture feet and core drill holes that are not precisely positioned are no longer a problem. Together with the innovative wall conduct incl. shell set for tool-free, perfectly sealed installation in the shell construction phase, this saves an enormous amount of installation time.

Award-winning design for every model

COMPAIR PRIME flow[®] was a winner at the Red Dot Award: Product Design 2023 and received a "special mention" at the German Innovation Award 2023. Available as a flat or round duct with a complete range of moulded parts, it solves almost every installation

situation. It can be connected to all extractor systems worldwide with 222 x 89 mm flat or 150 mm round duct connections.

Naber GmbH

A dynamically growing company within the kitchen accessories sector. More than 3,500 accessories items belong to the product range. Numerous internationally recognised design awards underline the innovative power of the family-owned business which is successful for decades.

Management

Hans-Joachim Naber is the tireless driving force behind the development and realisation of innovative products.

Ingrid Naber unerringly controls the areas human resources, organisation and finance.

Lasse Naber shapes the future direction of the company with drive and vitality.
